

AUTOMATIC TRANSMISSION CLEAN

MOTUL Automatic Transmission Clean is a high-performance cleaner for all types of automatic transmissions.

TYPE OF USE

MOTUL Automatic Transmission Clean is a pre-drain automatic transmission cleaner designed to be used in all types of automatic transmissions, conventional with torque converters (AT), with dual clutch transmission (DCT) or with continuously variable transmission (CVT) in preparation for an oil change.

MOTUL Automatic Transmission Clean effectively cleans deposits, sludge and varnish which appear on the automatic transmission components. The removed micro-particles are then evacuated during the process of oil drain leaving the transmission thoroughly clean.

MOTUL Automatic Transmission Clean provides perfect lubrication during the cleaning process.

PERFORMANCE

Removes operationally caused contamination and deposits from the automatic transmission gear box.

Protects against corrosion and premature wear.

The optimum shift function is restored and the service life of the automatic transmission is increased.

RECOMMENDATIONS

- 1) Add to automatic gear box before exchanging the transmission fluid.
 - 2) Run engine approx. 15 min with frequent load changes (use all gear positions).
 - 3) Exchange transmission fluid and filter according to manufacturer's instructions.
- Sufficient for up to 8 L capacity. For larger capacities add 40 ml per liter of gear oil.

SECURITY

Refer to the MSDS sheet and the information mentioned on the product label.
