THERMIC 150

Heat Treatment

DESCRIPTION

THERMIC 150 is a hot quenching oil with a high ignition point, used for scaled martensitic isotherm heat treatment and hot quenching of low and medium alloyed steels.

APPLICATIONS

THERMIC 150 hot quenching oil is specially adapted for the following heat treatments:

Cementation-quenching

– Low alloyed steels:
  16 CD 4 : tripods
  20 CD 4: ball pivots, steering racks, steering pinions

– Medium alloyed steels:
  20 NCD 2 : crown and pinion drives

Carbonitriding

– Low alloyed steels
  20 CD 4 : tulip shafts, driven gearbox shafts, gearbox pinions
  30 CD 4 : one-piece shafts, solid gearbox parts

Continuous hot quenching

– Hard carbon steels
  XC 48, XC 65, XC 80 : strips, sheets, etc.

THERMIC 150 is suitable for parts heated in batch type ovens with a protective atmosphere for the quenching tank.

ADVANTAGES

- Reduces strain and crack risks.
- Excellent thermal stability, THERMIC 150 does not decompose under the effect of repeated quenching.
- High quenching speed.
- Uniform results due to a viscosity that does not vary.
- High flash point, which reduces the risk of fire, even when it is used at 180°C.
- Low consumption, due to its fluidity it reduces loss by drag-out.
- THERMIC 150 is approved by PEUGEOT CITROEN and can be recommended for all automotive subcontractors.

The environmental, health and safety requirements are mentioned on the safety data sheet that is available at www.quickfds.fr
