

MOTUL CHAIN WAX

Lubricant for bicycle chains
Bottle with dropper nozzle – 100 ml
High-performance water-based wax emulsion

TYPE OF USE

MOTUL **CHAIN WAX** is a high-performance water-based lubricant specifically developed for bicycle chains and drivetrains.

Formulated with low melting point polyethylene waxes, this advanced wax emulsion penetrates deep into chain links before drying to form a clean, dry and durable lubricating film.

The resulting wax coating reduces friction, minimizes drivetrain wear and provides long-lasting protection in both wet and dry riding conditions. Unlike conventional oil-based lubricants, CHAIN WAX does not attract dust, dirt or abrasive contaminants, helping to keep the drivetrain clean and efficient throughout its service life.

Suitable for road, gravel and mountain bikes, urban and commuting bicycles as well as E-bikes.

PERFORMANCES

MOTUL **CHAIN WAX** provides excellent lubrication and drivetrain protection under a wide range of operating conditions.

Benefits

- Long-lasting lubrication performance in wet, humid and hot environments
- Forms a dry, non-sticky protective wax film
- Reduces friction and drivetrain noise
- Minimizes dirt and dust accumulation
- Maintains a clean transmission in all riding conditions
- Helps extend chain, cassette and chainring service life
- Excellent wear protection
- Easy and precise application
- Water-based formulation

RECOMMENDATIONS

For optimal performance, **CHAIN WAX** must be applied to a perfectly clean and degreased drivetrain.

Application Procedure

- Thoroughly clean and degrease the chain, cassette and chainrings.
- Ensure all drivetrain components are completely dry before application.
- Shake the bottle well before use.
- Apply **CHAIN WAX** to the inner side of the chain while slowly rotating the pedals backwards.
- Ensure each chain link receives sufficient product.
- Remove excess product with a clean, lint-free cloth.
- Allow the wax to dry and cure before riding. Ideally, apply the wax the day before your first ride; this gives the wax time to set on the drivetrain.

A 100 ml bottle provides approximately 40 lubrication applications under normal use conditions.

SECURITY

Refer to the MSDS – Material Safety Data Sheet and the information mentioned on the packaging.
