

MOTUL VALVE EXPERT

Lead substitute fuel additive
For all vintage gasoline engines

TYPE OF USE

Lead substitute fuel additive designed for older engines requiring leaded gasoline (cars, motorcycles, motorized lawnmowers, boats, etc.).

Suitable for all older engines with valve seats incompatible with unleaded gasoline, engines that require lead in the fuel to lubricate, protect, and prevent valve recession and valve seat wear (cars, motorcycles, boats, garden machinery, etc.).

Can be used in engines equipped with catalytic converters.

PERFORMANCES

The exclusive formulation of MOTUL VALVE EXPERT ensures perfect lubrication of valve seats and prevents valve recession.

It protects non-hardened valve seats against recession and wear in engines originally designed for leaded gasoline fuels.

This lead-substitute additive helps prevent engine compression loss, power loss, and engine damage.

It enables the use of modern unleaded gasoline fuels while maintaining engine reliability. Recommended for long-lasting protection of vintage and classic vehicles, motorcycles, marine engines, and older motorized gardening equipment. It is also suitable for vehicles equipped with catalytic converters.

RECOMMENDATIONS

Pour the entire bottle of MOTUL VALVE EXPERT directly into the fuel tank before filling up with unleaded gasoline.

One dose is sufficient for tanks up to 50 litres. Do not exceed the recommended dosage.

Hazardous. Observe the precautions for use.
